

1. I added two buttons to choose between cities and airports. By default we see cities.

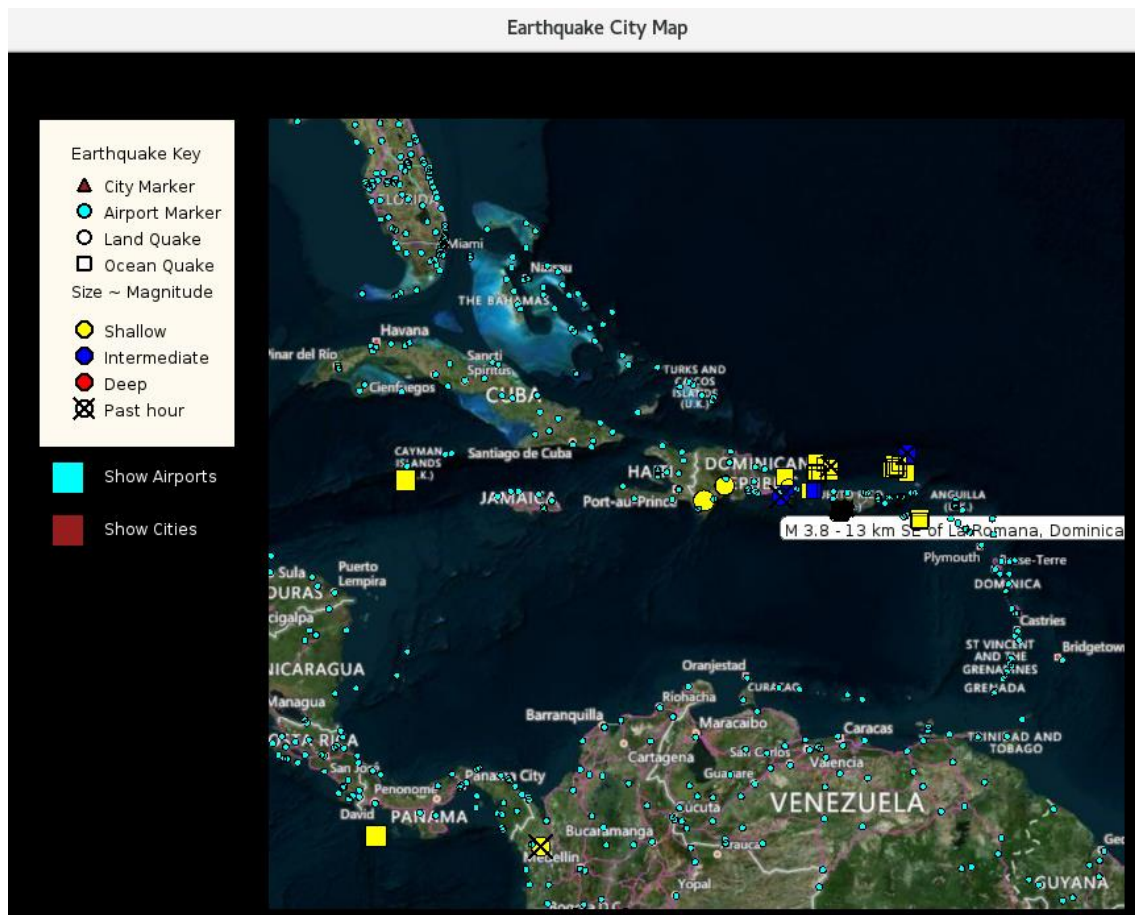

2. If you click in “Show Airports” button the cities are hidden and we show the airports.

3. If we hoover the mouse over a Airport Marker we can see its legend (country, city, name, and altitud)

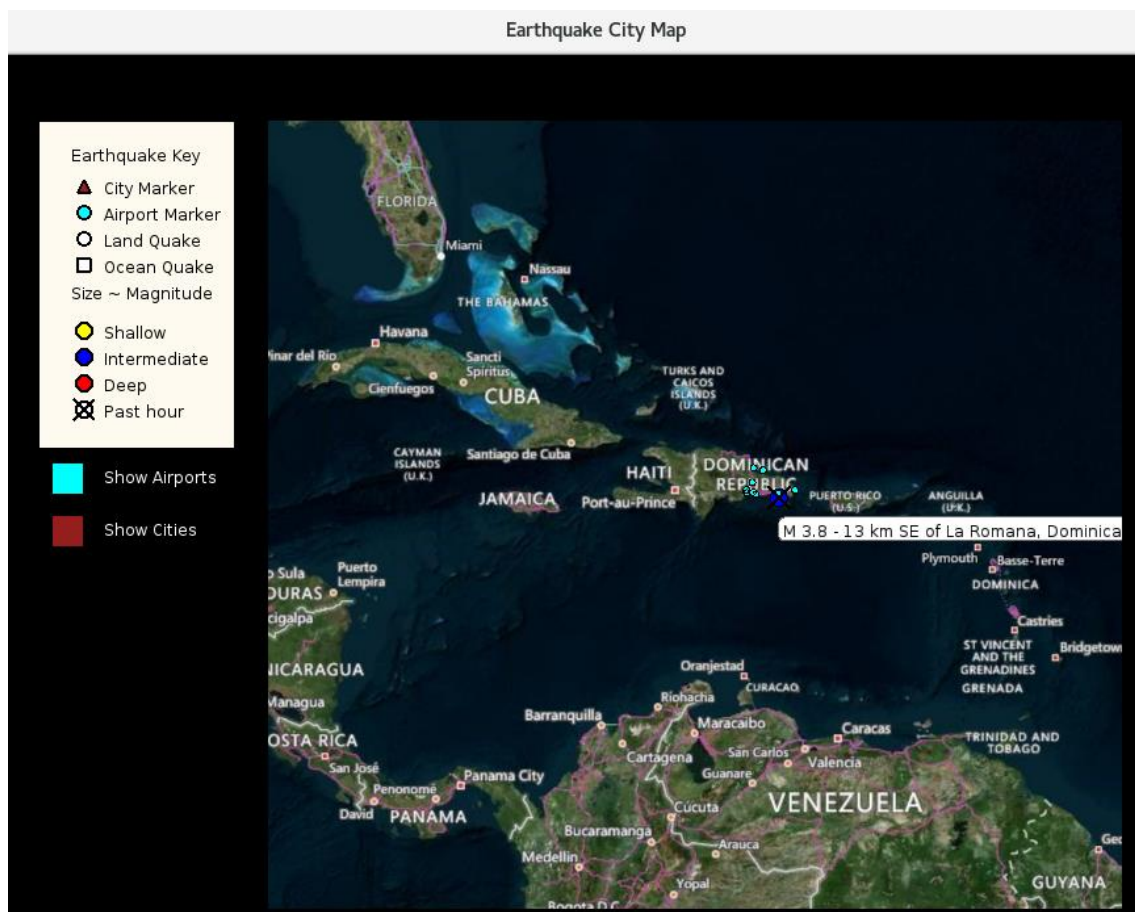

4. We want to see the Airports in the threaten zone of an earthquake as with the cities.

## 5. So we click in the earthquake.

6. We can come back to the cities view by clicking in the “Show Cities” button.
